

**FAASTeam presents:**

# **Mountain Flying**

Flying in the mountains is some of the most amazingly beautiful and satisfying flying you may ever accomplish. It doesn't come without increased risk and responsibility. GA pilots safely calculate and plan for such risks every day, and you can too. Join us for an overview of elements of mountain flying. In this seminar, we will announce an upcoming trip to the Colorado Rockies as an example trip. We'll look at how terrain and mountain weather patterns affect one another and what that means to small airplanes. We'll discuss density altitude in terms of how to calculate it and what it means for landing and departing high altitude mountain airports. And no mountain flying discussion is complete without emergency preparedness and survival gear. This seminar is one of two opportunities to obtain pre-trip briefing on the planned Colorado excursion of late June being organized by the Bay Area FlyOut Group (FOG.) We will use the routing of that trip to highlight the talk, but this session is open to non-participating pilots who wish to obtain the ground instruction related to a mountain checkout. This seminar is also offered on Wednesday, June 19 at 7:00pm. San Carlos Flight Center is committed to promoting safety in general aviation through our evening safety seminar programs.
